

ANSWERING THE CHALLENGES THAT FACE OUR GLOBAL ENVIRONMENT

PursaLex™... A system for your Entire House

Introducing a New Lifestyle to your Home & Family

Delivers water as pure as nature intends

After many years of international research and testing, Pursanova™ has combined the sciences and technologies of biochemistry and quantum physics leading to the design of a state-of-the-art water processing unit.

“Pursanova™ has created a process that takes water far beyond simple filtration”

Beyond mere filtration, the Pursanova™ anti-gravitational process first reduces harmful antioxidants and the “oxidation” found in regular water and then propels it through a field of proprietary ceramic ores to emerge a purer, and more energized water.

One point of entry, a world of uses!

With the installation of the Pursanova™ Water System in your home, you can be assured that you and those you love will be drinking and using the freshest, and purest water available anywhere.

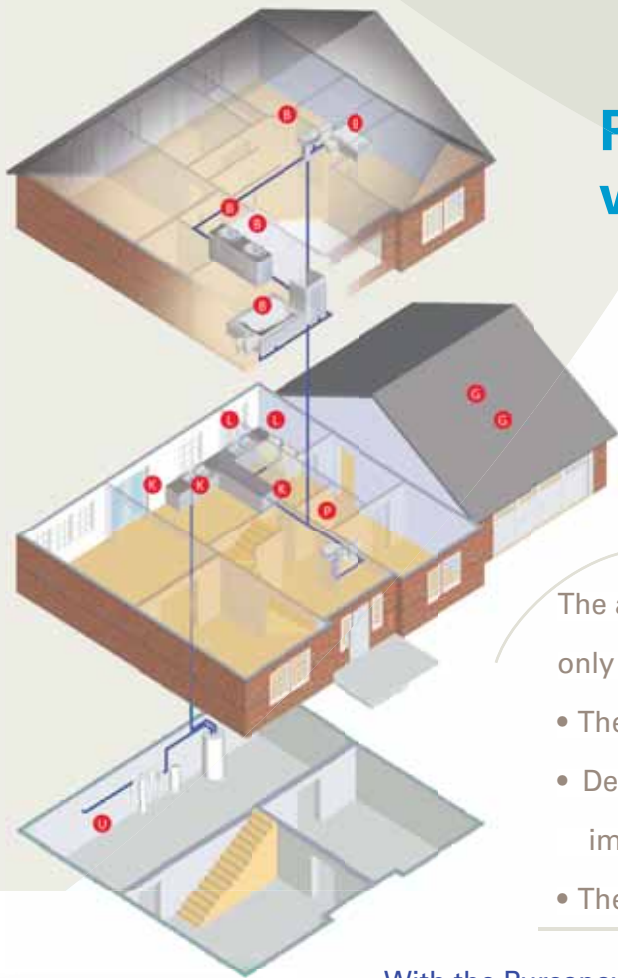

With Pursanova™ water and using a fraction of the regular amount of detergent, you will obtain superior results.

Pursanova™ at work in the HOME

As water is energized and processed through the Pursanova™ system, it enters your home ready for you to use confidently:

- As an excellent rinsing and preservation agent in food preparation;
- For cooking all foods and brewing and enriching the beverages you drink;
- In bathing and showering without concern for the effects of water-born contaminants;
- In your yard for greener, healthier gardens and landscaping.

The advantages of using Pursanova™ water over bottled water that you use only to drink:

- The cost of bottle water – retail markup
- Delivery charges, storage issues, container recycling cost and disposal impact on the environment
- The source and quality of water, regardless of labeling.

With the Pursanova™ Water System you will have an environmental ally. You will save by using less detergent, coffee beans, tea leaves and so on... Within several months, all pipes in your home will be cleaner. Sewer problems will be less, in addition, Pursanova™ wastewater is better for the environment.

Charting plant growth over time in Pursanova™ Water versus regular water

The specially engineered and blended ore components of Pursanova™ water yield impressive growth results

Offering limitless benefits for human health and our global environment!
